

KuikReads - Product Specification Document

"Read Faster. Finish More."

App Name: KuikReads

Tagline: "Read Faster. Finish More."

Platform: React Native with Expo Go (iOS & Android)

Target Launch: Q2 2026

Business Model: Freemium (Free tier + \$9.99/month premium)

Problem Statement

Modern readers face three critical challenges:

- Traditional reading is too slow for information-dense lifestyles
- Audiobooks lead to distraction and comprehension loss
- No effective tool exists to systematically increase reading speed while maintaining comprehension

Target Users:

- Professionals seeking efficient information consumption
 - Students managing heavy reading loads
 - Ambitious readers with annual book goals (e.g., 50 books/year)
 - Self-improvement enthusiasts
-

Solution Overview

A speed reading app that displays text one word at a time with the Optimal Recognition Point (ORP) highlighted, eliminating eye movement and enabling reading speeds of 300-600+ WPM while maintaining comprehension.

Core Features

1. Speed Reading Engine

Priority: P0 (MVP Critical)

Functionality:

- Display text one word at a time in center of screen
- Highlight Optimal Recognition Point (ORP) - typically the first letter after the midpoint of each word
- Adjustable WPM settings: 100-1000 WPM range (default start: 300 WPM)
- Pause/play controls with tap-to-pause
- Skip forward/backward by sentence or paragraph
- Adjustable font size and background color (dark mode support)

Technical Requirements:

- Text parsing algorithm to identify ORP for each word
 - Precise timing engine for word display intervals
 - Smooth rendering at 60fps minimum
 - Low latency controls (< 100ms response time)
-

2. Content Input & Management

Priority: P0 (MVP Critical)

Content Sources:

- Manual text paste
- File upload (TXT, PDF, EPUB)
- URL article import (web scraping)
- **Phase 2:** Kindle library sync
- **Phase 2:** Pocket integration
- **Phase 2:** Browser extension for one-click article saves

Content Processing:

- Text extraction from various formats

- Remove formatting, ads, and navigation elements
- Preserve chapter/section structure
- Save reading position automatically
- Create content library with covers, titles, authors

Technical Requirements:

- PDF text extraction library (e.g., react-native-pdf or expo-document-picker)
 - Web scraping/article parsing API (e.g., Mercury Parser, Diffbot)
 - Local storage for content caching
 - Cloud sync for cross-device access
-

3. Progress Tracking & Analytics

Priority: P1 (Launch Critical)

Metrics Tracked:

- Total words read
- Total time spent reading
- Books/articles completed
- Average WPM over time
- Daily/weekly/monthly reading stats
- Current streak (consecutive days reading)
- Personal records (longest session, highest WPM)

Visualizations:

- Progress graphs (reading speed over time)
- Calendar heatmap for reading consistency
- Book completion progress bars
- Annual goal tracker (e.g., "12 of 50 books")

Technical Requirements:

- Local analytics database (SQLite or Realm)
- Cloud backup for premium users

- Data visualization library (e.g., react-native-chart-kit or Victory Native)
-

4. Gamification System

Priority: P1 (Launch Critical)

Features:

- Daily reading streaks with streak protection (1 per month)
- Achievement badges (speed milestones, book completions, consistency)
- Reading challenges (e.g., "Read 5 books this month")
- Leaderboards (optional social feature for Phase 2)
- Level system based on total words read

Achievements Examples:

- "Speed Demon" - Read at 500+ WPM for 10 minutes
 - "Bookworm" - Complete 10 books
 - "Consistency King" - 30-day reading streak
 - "Night Owl" - Read after 10 PM for 7 consecutive days
-

5. Comprehension Testing

Priority: P2 (Post-Launch Enhancement)

Functionality:

- Optional quiz after completing chapters/books
- Multiple choice questions about key points
- Comprehension score tracking
- Adaptive WPM recommendations based on comprehension scores

Technical Requirements:

- AI-generated questions (OpenAI API integration)
- Question bank storage
- Score calculation and history

User Flows

Primary Flow: Reading a Book

1. Onboarding (First-time user)

- Welcome screen explaining speed reading
- Short tutorial (30-second demo at 200 WPM)
- Set initial reading goal
- Optional account creation

2. Home Screen

- Continue reading (if book in progress)
- Library view (grid of books/articles)
- Add content button (prominent)
- Stats summary widget
- Daily goal progress

3. Adding Content

- Choose source: Upload file / Paste text / Import URL
- Content processing loader
- Content preview and metadata editing
- Save to library

4. Reading Session

- Pre-reading screen: Select WPM, font size, color scheme
- Reading interface: Word display with ORP highlight
- Overlay controls: Pause, WPM adjuster, progress bar
- Post-session: Stats summary, achievement unlocks

5. Library Management

- Browse saved content
 - Filter: Books, Articles, In Progress, Completed
 - Search functionality
 - Delete/archive options
-

Technical Architecture

Tech Stack

- **Framework:** React Native with Expo (managed workflow)
- **Language:** TypeScript
- **Navigation:** React Navigation (v6+)
- **State Management:** Redux Toolkit or Zustand
- **Local Database:** Expo SQLite or AsyncStorage
- **Backend/Auth:** Firebase (Auth, Firestore, Storage) or Supabase
- **Payment Processing:** RevenueCat (for subscriptions)
- **Analytics:** Expo Analytics + Mixpanel
- **Text Processing:** Custom ORP algorithm + parsing libraries

Key Expo Packages

- `expo-document-picker` - File uploads
- `expo-file-system` - File management
- `expo-sqlite` - Local database
- `expo-sharing` - Share reading stats
- `expo-notifications` - Reading reminders
- `expo-secure-store` - Secure token storage

Third-Party Services

- **Content Parsing:** Custom API or third-party (e.g., Jina Reader API)
 - **Cloud Sync:** Firebase Cloud Firestore
 - **Payments:** RevenueCat + App Store/Play Store
 - **Analytics:** Mixpanel for user behavior
 - **Crash Reporting:** Sentry
-

Screen Breakdown

Required Screens (MVP)

1. **Onboarding Flow**

- Welcome
- Tutorial
- Goal Setting
- Sign Up (optional)

2. Home/Library Screen

- Content grid/list
- Continue reading widget
- Stats summary
- Add content button

3. Add Content Screen

- Upload options
- URL input
- Text paste area

4. Reading Configuration Screen

- WPM selector
- Font size
- Color theme
- Start button

5. Speed Reading Screen

- Word display area
- ORP highlight
- Control overlay (pause, skip, adjust)
- Progress bar

6. Session Summary Screen

- Words read
- Time spent
- Average WPM
- Achievements unlocked

7. Profile/Stats Screen

- Reading statistics
- Progress graphs
- Achievements

- Settings

8. Settings Screen

- Account management
- Notification preferences
- Display preferences
- Subscription management
- Help/FAQ

9. Paywall Screen

- Feature comparison
 - Pricing
 - Purchase flow
-

Monetization Strategy

Free Tier

- 30 minutes of reading per day
- Basic progress tracking
- Manual content upload (text, basic PDF)
- Core speed reading features
- Limited to 5 saved books/articles

Premium Tier (\$9.99/month or \$79.99/year)

- Unlimited reading time
- Kindle library sync
- Pocket integration
- Advanced analytics and insights
- Unlimited content library
- Comprehension testing
- Priority customer support
- Offline reading
- Cross-device sync

- Custom themes and fonts

Revenue Projections (Year 1)

- Target: 50,000 downloads
- Conversion rate: 5% to premium = 2,500 subscribers
- Monthly recurring revenue: \$24,975
- Annual run rate: ~\$300K

Future Revenue Streams

- B2B/Education licensing
 - Publisher partnerships (revenue share)
 - Affiliate commissions on book sales
 - White-label solutions for publishers
-

Marketing & Growth Strategy

Launch Strategy

1. **Pre-Launch** (Month -1)
 - Beta testing with 100 users
 - Build social media presence
 - Create demo videos
 - Reach out to productivity influencers
2. **Launch Week**
 - Product Hunt launch
 - Reddit posts (r/productivity, r/books, r/getdisciplined)
 - Twitter/X thread with demo
 - Tech blog outreach (TechCrunch, The Verge)
3. **Post-Launch** (Month 1-3)
 - Content marketing (blog about speed reading)
 - YouTube tutorials and reviews
 - App Store Optimization (ASO)
 - Referral program (free week for referrals)

Viral Hooks

- "I read 50 books in 2026 using this app"
 - Social sharing of reading stats
 - Challenge friends features
 - Annual reading report (Spotify Wrapped style)
-

Development Roadmap

Phase 1: MVP (Months 1-3)

Core Features:

- Speed reading engine with ORP
- Manual text/PDF upload
- Basic progress tracking
- User accounts and authentication
- Freemium paywall
- Home screen and library

Deliverables:

- Functional iOS and Android apps
- Backend infrastructure
- Payment integration
- App Store/Play Store submission

Phase 2: Enhancement (Months 4-6)

Additional Features:

- Kindle sync integration
- Pocket integration
- URL article import
- Advanced analytics dashboard
- Achievement system

- Dark mode and themes

Phase 3: Growth (Months 7-12)

Expansion:

- Comprehension testing with AI
 - Social features (challenges, leaderboards)
 - Browser extension
 - API partnerships with publishers
 - Offline reading mode
 - Reading recommendations
-

MVP Version - Detailed Guidelines

What to Build FIRST (Weeks 1-8)

The MVP should focus on proving the core value proposition: "Can users actually read faster and finish more books?" Everything else is secondary.

MVP Core Features (Must Have)

1. Speed Reading Engine (Week 1-3)

- Single-word display with ORP highlighting
- WPM control: 100-600 range (increments of 50)
- Basic controls: Play, Pause, Restart
- Progress indicator (% complete)
- Simple font, one color scheme (dark text on white background)

Technical Implementation:

- Use React Native Animated API or Reanimated
- Store parsed text as array of words
- Calculate interval: $(60 / \text{WPM}) * 1000 \text{ ms}$
- Identify ORP: $\text{Math.floor}(\text{word.length} / 2)$ or use more sophisticated algorithm
- Use `setInterval` or `requestAnimationFrame` for timing

2. Content Input - Text Only (Week 2)

- Manual text paste (primary method)
- Character/word count display
- Basic text cleaning (remove extra spaces, line breaks)
- Save to local storage only

Why text-only for MVP: PDF parsing is complex and buggy. Start simple. Users can copy-paste from Kindle, web, or documents.

3. Minimal Library (Week 3)

- List view of saved texts (title + date)
- Delete functionality
- Tap to start reading
- Show reading progress (0%, 50%, 100%)
- Limit: 10 saved items for free tier

4. Basic Progress Tracking (Week 4)

- Track total words read (session + all-time)
- Track total time spent reading
- Show current reading streak (consecutive days)
- Simple stats screen with 3 numbers: Words, Time, Streak

5. Simple Onboarding (Week 1)

- 3 screens max:
 - Welcome: "Welcome to KuikReads - Read faster. Finish more books."
 - Quick tutorial: 30-second demo at 250 WPM
 - Get started: Jump to library

6. User Accounts - Firebase (Week 5-6)

- Email/password authentication
- Google Sign-In (easier onboarding)
- Anonymous guest mode (convert later)
- Store user data in Firestore
- No profile pictures, no social features

7. Freemium Paywall (Week 6-7)

- Free tier: 30 mins/day reading time
- Timer tracking during reading sessions
- Paywall modal when limit reached
- Premium: \$9.99/month for unlimited
- RevenueCat integration for subscriptions

8. Essential Screens Only (Week 7-8)

- Onboarding (3 screens)
- Library/Home (1 screen)
- Add Content (1 screen - text paste)
- Reading Screen (1 screen)
- Stats (1 screen)
- Settings (1 screen - minimal)
- Paywall (1 screen)

Total: 9 screens for MVP

What to SKIP in MVP

Do NOT build these yet:

- ❌ PDF upload (parsing is unreliable and time-consuming)
- ❌ EPUB support
- ❌ URL/article import
- ❌ Kindle sync
- ❌ Pocket integration
- ❌ Achievements and badges
- ❌ Gamification beyond streak
- ❌ Comprehension tests
- ❌ Multiple themes
- ❌ Font customization
- ❌ Advanced analytics (graphs, charts)
- ❌ Social features
- ❌ Export/sharing

- ❌ Cloud sync (use Firestore basics only)
- ❌ Notifications/reminders
- ❌ Reading recommendations

MVP Success Criteria

Before adding new features, validate these metrics:

User Engagement:

- 40%+ of users complete onboarding
- Average of 3+ reading sessions per week
- 20%+ of users return on Day 7
- Average session length: 10+ minutes

Product Validation:

- Users increase WPM by 30%+ after one week
- 60%+ of users save more than 1 text
- 10%+ of active users hit the 30-min daily limit

Revenue:

- 3-5% free-to-paid conversion
- \$500+ MRR within 3 months of launch

If these metrics aren't hit, iterate on core experience before adding features.

Post-MVP: Feature Priority Matrix

Once MVP is validated, add features in this order:

Priority 1 (Months 4-5): Reduce Friction

These features make the core experience smoother:

1. PDF Upload with Text Extraction

- Use `react-native-pdf` or `expo-document-picker`
- Extract text with parsing library
- Handle formatting issues gracefully

- User can edit extracted text if needed

2. URL/Article Import

- Web scraping API (Jina Reader, Diffbot, or custom)
- One-tap import from browser
- Auto-detect article content vs ads/navigation
- Save with metadata (title, author, source)

3. Reading Customization

- Font size adjustment (3 options: S, M, L)
- Color themes: Light, Dark, Sepia
- WPM presets: "Beginner" (250), "Intermediate" (400), "Advanced" (600)

4. Better Controls

- Skip forward/back by sentence
- Tap left/right sides of screen to control
- Swipe down to pause
- Speed adjustment during reading (slider)

Priority 2 (Month 6): Increase Engagement

These features keep users coming back:

1. Achievement System

- 10-15 badges for milestones
- Unlock animation when earned
- Display on profile
- Push notification when achieved

2. Enhanced Analytics

- Reading speed over time (line graph)
- Words read per day (bar chart)
- Weekly/monthly summaries
- Personal records

3. Daily Goals

- Set custom reading time goal (10, 20, 30 mins)
- Visual progress ring
- Streak protection (1 free pass per month)

- Completion celebration

4. Improved Onboarding

- WPM assessment test (read 1 min, calculate baseline)
- Personalized recommendations
- Set reading goal during signup

Priority 3 (Months 7-9): Premium Features

These drive premium subscriptions:

1. Kindle Library Sync

- OAuth integration with Amazon
- Import highlights and notes
- Sync reading progress
- Requires partnership or workaround

2. Pocket Integration

- OAuth with Pocket
- Auto-import saved articles
- Two-way sync
- Mark as read in Pocket when finished

3. Offline Reading

- Download content for offline access
- Sync progress when back online
- Manage downloads (delete, priority)

4. Comprehension Testing

- AI-generated questions (GPT-4 API)
- 3-5 questions per chapter/article
- Track comprehension score
- Suggest WPM adjustment based on scores

Priority 4 (Months 10-12): Growth & Differentiation

These create viral loops and competitive moats:

1. Social Features

- Reading challenges (private groups)
- Leaderboards (friends only)
- Share reading stats (Instagram-style cards)
- Book clubs with synchronized reading

2. Browser Extension

- One-click save from any webpage
- Reading list management
- Cross-device sync

3. Smart Recommendations

- Based on reading history
- Trending articles in your interests
- Friends' recommendations

4. Advanced Features

- Variable WPM (slow for complex sentences)
- Punctuation pause adjustment
- Chapter/section bookmarks
- Text-to-speech fallback option

Feature Decision Framework

When deciding whether to build a feature, ask:

1. **Does it improve the core reading experience?** (Yes → Priority 1)
2. **Does it increase retention or engagement?** (Yes → Priority 2)
3. **Does it drive premium subscriptions?** (Yes → Priority 3)
4. **Does it create viral growth?** (Yes → Priority 4)
5. **Is it technically complex?** (Yes → De-prioritize)
6. **Did users request it?** (Yes → Consider based on frequency)

Golden Rule: Only build features that move your key metrics (engagement, retention, conversion). Everything else is distraction.

Success Metrics (KPIs)

User Acquisition

- Downloads per month
- Sign-up conversion rate
- Cost per acquisition (CPA)

Engagement

- Daily Active Users (DAU)
- Average session length
- Reading sessions per week per user
- Retention rate (Day 1, Day 7, Day 30)

Revenue

- Free-to-paid conversion rate
- Monthly Recurring Revenue (MRR)
- Customer Lifetime Value (LTV)
- Churn rate

Product

- Average reading speed improvement (WPM increase over time)
 - Books completed per user per month
 - Feature usage rates
-

Risk Analysis

Technical Risks

- **Text extraction quality:** Mitigate with multiple parsing libraries and manual correction option
- **Performance at high WPM:** Extensive testing and optimization required
- **Cross-device sync conflicts:** Implement conflict resolution strategy

Business Risks

- **User adoption:** Speed reading is niche - focus on productivity market
- **Competition:** Differentiate with superior UX and gamification
- **Publisher resistance:** Position as traffic driver, not replacement

Legal Risks

- **Copyright concerns:** Users upload their own content (safe harbor)
 - **Kindle ToS:** Review Amazon's API terms carefully
 - **Data privacy:** GDPR/CCPA compliance essential
-

Competitive Analysis

Direct Competitors

- **Spreeder:** Web-based, dated UI, no mobile app
- **ReadMe!:** iOS only, limited features, no progress tracking
- **Blinkist:** Book summaries (different use case)

Competitive Advantages

1. Modern, mobile-first design
 2. Comprehensive gamification
 3. Multiple content sources (Kindle, Pocket, manual)
 4. Cross-platform (iOS + Android)
 5. Social features and challenges
 6. Advanced analytics
-

Next Steps

1. **Validate Assumptions**
 - User interviews with target audience (n=20)
 - Test speed reading effectiveness
 - Validate pricing with surveys
2. **Design Phase**

- Create wireframes for all screens
- Design visual identity (logo, colors, typography)
- Build interactive prototype

3. Development Phase

- Set up development environment (Expo, Firebase)
- Build core reading engine
- Implement content upload
- Create user authentication

4. Testing Phase

- Alpha testing internally
- Beta testing with 50-100 users
- Gather feedback and iterate

5. Launch Phase

- App Store and Play Store submission
- Marketing campaign execution
- Monitor metrics and fix bugs

Team Requirements

Minimum Team:

- 1 React Native Developer (you!)
- 1 UI/UX Designer (can outsource initially)
- 1 Backend Developer (optional if using Firebase)

Budget Estimate (6-month MVP):

- Development: \$10-20K (if outsourcing parts)
 - Design: \$3-5K
 - Infrastructure: \$500-1000 (Firebase, domain, etc.)
 - Marketing: \$2-5K
 - **Total: \$15-30K**
-

Conclusion

KuikReads addresses a real pain point for ambitious readers and knowledge workers. With a clear monetization strategy, strong differentiation, and achievable technical scope for React Native + Expo, this project has strong potential for user traction and acquisition interest from major players in the reading/education space.

The name "KuikReads" is memorable, brandable, and clearly communicates the core value proposition: quick, fast reading to help users accomplish their reading goals.

Recommended First Action: Build a minimal prototype with just the core reading engine using Google Books API to validate the speed reading experience and user interest before investing in full development.

Domain: kuikreads.com

Social Handles: @KuikReads

App Store/Play Store Name: KuikReads - Speed Reading
